

5cm C-Nav GNSS Service

C-Nav, USA, has launched its improved five-centimetre C-NavC2 GNSS subscription service. C-NavC2 supports GPS and GLONASS corrections and delivers the real-time Precise Point Positioning solutions around the world. The service utilises proprietary algorithms combined with high-precision measurements from a global tracking network of multi-frequency, multi-constellation geodetic-quality C-Nav3050 receivers.

Tim Patro, C-Nav Division Manager, says that combining GPS and GLONASS correctors in C-NavC2 has given C-Nav superior performance and the ability to give their customers five-centimetre horizontal accuracy. He added that the processing algorithms and satellite tracking network delivers performance and reliability.
