

Dong Energy Geophysical Survey Assignment

Clinton will conduct a large geophysical scope of work for the Hornsea Project Three windfarm (as the company seeks to establish a more accurate geophysical baseline for the potential Project area). The area, is approximately 760 km² and is up to 150km offshore.

DONG Energy's Site Investigation project manager, Roland Gotfredsen, says to have awarded the contract to Clinton as they have provided the company with an interesting offer both in regards to technology, price and quality and thinking out of the box regarding the set-up of the survey.
