

First SeaBat T50-P Sold at Shallow Survey 2015

Following a demonstration at the 7th International Shallow Survey 2015 Conference held in Plymouth, UK, Marine Data Consultants (MDC) from Cape Town in South Africa have ordered a new SeaBat T50-P ultra-high-resolution multibeam echosounder system. The SeaBat T50-P will be officially launched at the Teledyne Marine Technology Workshop, which is taking place in San Diego, USA, from 4-7 October 2015.

The SeaBat T50-P is the new addition to the leading SeaBat T-series product range engineered from the ground up. Combined with the Portable Sonar Processor the SeaBat T50-P provides survey data, providing faster operational surveys and reduced processing time.
