

# Long-offset NWAAM 2D Data Survey

Dolphin Geophysical has signed a further agreement with the AGC Authorities to acquire an additional 2D multi-client survey over designated deep-water blocks in the North West Africa Atlantic Margin (NWAAM) soon to be offered to industry for licensing.

The new long-offset 2D data will form part of the ongoing NWAAM project commenced in 2011. Data will be processed in the UK by Dolphin's partner in the project, TGS, who will also integrate these new lines with the Regional Interpretation work already in progress. Following the completion of this, road-show seminars are being scheduled in London, UK, and Houston, USA, later this summer when representatives from each of the governments will promoting available acreage as well as hold private discussions with interested companies.

Acquisition of these new AGC lines is already underway and scheduled for completion by mid-April. These additional data of about 1,800km will make the total for the NWAAM project to date around 17,000km from Northern Senegal to Southern Guinea Conakry.
