

# Mariscope Meerestechnik Expands Production Facility

Mariscope has moved to a new facility in the town of Gettorf (near Kiel), Germany. Mariscope Meerestechnik has been involved in ROV and marine technology manufacturing for 22 years and is still owned by its original founder, Christian Haag. Mariscope is specialised in customised designs, special developments and prototypes. ROVs are manufactured in stainless steel materials, frames are hand welded and the units are known for their robustness.

Mariscope's systems are completely developed and built in Germany, and the new facilities give the company the possibility to keep up with the increasing demand in their products. All areas of the company were able to grow in space and quality. Since Mariscope gives lifetime warranty on its ROVs, testing and QC is always a main concern

before the delivery of a system.
