

# Port of China Container Positioning and Tracking System

NovAtel's dealer, Beijing BDSTAR Navigation Co. (China), has completed deployment of NovAtel GPS-based systems for the Shanghai Yangshan port Container Terminals (SYCT), one of the largest cargo ports in the world. NovAtel GPS engines will power a system used for positioning and tracking all container-handling equipment in Yangshan Port Phase I and Phase II terminals, including quayside cranes, rubber-tired gantry cranes, forklifts, reachstackers and trailers.

BDSTAR has established itself as a strategic supplier in this market with previous contract wins for Ningbo Port Second Container Terminal (NBSCT) September 2006; Shanghai Yangshan Container Terminals (SYCT) August 2006; Shenzhen Chiwan Container Terminals (CCT) April 2006; Tianjin Container Terminals (TCT) 2004; and other container terminals in Shen Zhen and Hong Kong.
