

SEA Corporation as REMUS Service Centre

Hydroid, USA, has recognised Japan-based SEA Corporation as an authorized REMUS Service Centre. Hydroid presented SEA Corporation with a plaque on 12 October 2015. Through its investment in facilities, security and diagnostic equipment and commitment to training technical staff, SEA Corporation has created a service centre in Chiba, Japan for the maintenance and repair of Hydroid's REMUS 100 and REMUS 600 vehicles and support equipment.

This local capability will significantly increase operational availability for Japan's REMUS customers. SEA Corporation's technical staff offers customers a first line of technical and

field support, ensuring more successful deployments.

Since the first delivery of a REMUS system in Japan, SEA Corporation has set a goal of providing first line service and support locally. They have invested in facilities and training.
