

# Signature250 Deep Water Wave and Ice System

During the Offshore Technology Conference, which is being held in Houston, USA, from 4-7 May 2015, Nortek is showcasing its new products. One of them is the Signature250 Deep Water Wave and Ice System, due to be launched in June.

The Signature250 is a current profiler, wave measurement and ice tracking system with 150m range. The ability to measure both current profiles and wave parameters from a single instrument mounted subsurface in deep water has made the AWAC a versatile and cost-effective instrument.
