

Teledyne BlueView Partners with Measutronics

Measutronics Corporation has selected Teledyne BlueView as its Strategic Marine Partner for distribution in the Americas. Founded in 1997, Measutronics is a solution provider bringing additional expertise in marine positioning, guidance, mapping and underwater imaging to the Teledyne Marine portfolio. Teledyne BlueView has timed the new partnership with Measutronics to introduce BlueView's MotionScan, allowing the BV5000 multibeam scanning sonar user to collect motion-corrected 3D point clouds from a moving platform.

Ted Germann, chief sales and marketing executive at Teledyne BlueView, states that Measutronics' technicians bring a wealth of additional experience and industry knowledge to the organisation. He is looking to utilise Measutronics' capabilities to provide on-water system demonstrations, as well as classroom training, in supporting Teledyne BlueView's customer base.
