

# Service Agreement for Nord Stream 2 Award

Atlas' Offshore Management & QC team has secured a frame agreement with Nord Stream 2; an international consortium of six major companies: PJSC Gazprom, the German companies Uniper SE and BASF SE/Wintershall Holding GmbH, the Anglo-Dutch Royal Dutch Shell plc, the Austrian OMV AG and the French Engie S.A. The service agreement will last until the end of 2018 and will allow Atlas' team to supply Offshore Vessel Representatives for survey vessels to the project.

The Nord Stream 2 gas pipeline builds on the success of the Nord Stream project; a twin pipeline that was installed through the Baltic Sea in 2011 and 2012. The new pipeline will transport natural gas from the world's largest reserves in Northern Russia and will help to safeguard Europe's long-term energy security.
