

# Swathe Services to Distribute SBG Systems in UK and Ireland

SBG Systems has appointed Swathe Services to be an authorised sales and support distributor for the marine hydrography market in the UK and Ireland. This includes all products within the Ellipse, Ekinox and Apogee product lines and includes the Split-Box with associated components.

[SBG Systems](#) offers a complete line of high-performance and miniature attitude and heading reference systems (AHRS), motion reference units (MRU) and inertial navigation systems (INS) with embedded GNSS receiver (INS/GNSS). The company's inertial navigation systems allow accurate data georeferencing whether a sonar or Lidar is mounted on a manned survey vessel, an unmanned surface vehicle (USV), a remotely operated vehicle (ROV) or an autonomous underwater vessel (AUV). These compact, low

power, and cost-effective sensors enable DVL or dual antenna GPS fusion with inertial data.
