

AGEOTEC ROV Sirio Delivered to Tripodij Doo

Lighthouse has delivered an [AGEOTEC ROV Sirio](#) to Tripodij Doo, a Croatian company based in Dugopolje (Split, Croatia). This ROV Sirio, configured according to specific customer requirements, has been equipped with a Triton USBL Micronav 100 and a 1 function manipulator with a cutting cable unit. The AGEOTEC ROV Sirio has been successfully tested in the swimming pool, where the factory acceptance test was positively conducted.

The Croatian company decided to purchase its first underwater vehicle, which well complies with their needs: reduced overall dimensions, easy vehicle handling and management, reduced maintenance downtime and a modular vehicle design.

Founded in 2001, Tripodij Doo is specialised in pipe inspections and visual cable detection and in the past used to rent small ROVs and equipment to accomplish its missions. The contract follows a meeting during [Ocean Business 2017](#), one of the most important exhibitions for ocean technology which was the ideal opportunity for the supplier to present its range of underwater vehicles.

Within less than a week, the vehicle was already working in Croatia!
