

# Database Production for Polish Navy

The Hydrographic Office of the Polish Navy (HOPN) is making the move to a database-driven production solution with CARIS HPD. HPD will enable HOPN to update product-specific features and make customisations while maintaining the source data, providing efficiencies and ensuring improved standards of consistency.

HOPN has in recent years gained experience with CARIS' database solutions when implementing CARIS Bathy DataBASE for the management of their bathymetric data.

A series of visits by CARIS consultants will take place over the first quarter of the year for training and consulting to aid in implementing HPD fully into the HOPN chart production workflow.

HOPN is responsible for navigation, hydrography, oceanography and meteorology of Polish waters and areas of operational significance for the Polish Navy. All surveys, charts and publications produced by HOPN meet International Hydrographic Organization (IHO) standards and recommendations.
