

GeoSurvey Updated to Support EdgeTech Towfish Range

Coda Octopus has released version 7.2.0 of its GeoSurvey software suite. This has been updated to support the latest digital acquisition interfaces for the EdgeTech range of towfish. The supported towfish include: 4125, 4200 and the combined sonar range.

Liaising with the EdgeTech development team on site at Boca Raton, Coda Octopus Product Support tested and validated the updated towfish interfaces.

GeoSurvey software provides an integrated platform for sidescan and sub-bottom acquisition. With a series of options within the DA4G range, including both analogue and digital acquisition interfaces, and backed up with unrivalled global service and support, CodaOctopus:GEO remains the family of choice for advanced geophysical solutions.
