

# Java Offshore Acquires Asian Geos

Java Offshore, headquartered in Indonesia, has recently completed the acquisition of a majority stake in Asian Geos, a specialist offshore geotechnical and geophysical service provider within the Asia Pacific market, from both Gardline Geosciences and Helms Geomarine. The acquisition will further enhance Java Offshore's existing portfolio of services through the addition of an offshore geotechnical and engineering capability focused in the oil and gas, marine renewables, marine civil engineering and telecommunication sectors.

The additional service offering creates value for customer by being able to reduce contractual interface risks whilst ensuring that its overall objectives of any related projects are met. The ability to undertake both geophysical and geotechnical services will also provide customers with a cost effective and integrated approach of acquiring, analysing and interpretation of data required for various engineering design and drilling requirements.

On top of that the combined assets, resources and network locations will support for an improved responsiveness and reduced costs for customers within the Region.

Dato' Ir. Mohamad Helmi Zulkawi, managing director of Asian Geos said the acquisition stemmed from their aspiration to expand their operations capabilities and realise long-term plans of further enhancing its service offering in Malaysia and globally. This partnership gives Asian Geos the opportunity to promote and securing more international businesses.
