

MESURIS Surveys the Anse du Portier Project

MESURIS TOPOMETRYX HR laser scanner.

MESURIS is currently working in Monaco for the Anse du Portier project with the launch of a new hydrographic vessel 'SURVEX 6', which is fully equipped with all calibrated and configured sensors for daily high-resolution survey. All sensors are controlled by QPS QINSy software, able to handle in real time multibeam data from the Teledyne Reson 7125, iXblue ECHOES 10000 sub-bottom profiler and

The SURVEX 6 unit produces high-density data processed on the same day with the QIMERA software suite from QPS.

Founded in 1993, MESURIS is specialised in multibeam bathymetry and has built its reputation on its unconditional commitment to produce high-resolution data for marine works. For BOUYGUES TRAVAUX PUBLICS MONACO, MESURIS Monaco hydrographic surveyor is producing all surveys required to follow underwater construction for the Anse du Portier project.
