

Nautilus Marine Services to Represent Stema Systems

Dutch company Stema Systems has chosen Nautilus Marine Service GmbH to market its comprehensive range of hydrographical and geophysical products and services to Germany, Austria and Switzerland.

With Silas & The RheoTune mud density systems, measuring both rheological and density properties, Stema Systems offers sub-bottom profiling methodology to enable a concise and accurate picture of the nautical depth of the fluid mud in water bodies, as well as providing an ultra-high-resolution profile of the substrata.

The cooperation between Stema Systems and Nautilus Marine Service as the representative of some of the world's leading manufacturers of marine technologies in

Germany will strengthen the position of both companies to provide a complete and complimentary range of products and services that enables its clients to conduct comprehensive hydrographic, geo seismic and oceanographic surveys of the entire maritime environment including single and multibeam surveys, harbour slip monitoring, site clearance of wind turbine foundations and cable and pipeline detection to name but a few.
