

Offshore Energy: Registration Opens

The registration for [Offshore Energy Exhibition & Conference 2017](#) (OEEC 2017) is open. The tenth edition of this event, taking place from 9-11 October 2017 in Amsterdam, the Netherlands, is expected to attract over 12,000 offshore professionals and more than 650 exhibiting companies. Offshore Energy is an annual event focused on the complete offshore energy industry. It covers both the exploration and production of the conventional energy resources oil & gas as well as the expanding renewable part of the energy mix such as offshore wind and marine renewable energy.

Next to the exhibition that covers an area of around 26,000 m², a vast amount of speakers representing some of the biggest players in the offshore energy industry will feature at the conference. The conference presents an extensive three day conference programme consisting of a keynote, technical sessions, master classes, meetings of industry organisations, the Marine Energy Event and the Offshore WIND Conference.

Transformation Through Collaboration

This year's theme is 'Transformation through collaboration' which will focus on the transformation happening both in oil, gas and in renewables as a consequence of a lower for longer price environment. Both the lower price of oil and gas and the lower price per kWh for offshore wind power present challenges for the industry – albeit for very different reasons – and are leading to intensified collaboration. Add to this the industry's efforts in making the energy transition happen and you have a very topical mix of themes which will feature prominently in the conference program, but can also be experienced on the exhibition floor where exhibitors will offer their own solutions for tomorrow's energy mix.
