

# Online S-100 and S-101 Standard Training and Workshops

Teledyne CARIS has launched a self-paced, online training programme, which examines the International Hydrographic Organization (IHO) S-100 Standard and the related S-101 Electronic Navigational Chart (ENC) Production Specification.

This informative workshop is intended for anyone interested in learning about the S-100 Standard. It will help answer commonly asked questions including: What is S-100? What are some of the benefits? What is an S-101 ENC and how does it relate to S-100? What is the current status of S-100 and S-101? What are some other products based on S-100?

The workshop is organized into six parts, each containing a set of related chapters and is comprised of:

- Text with diagrams, screen captures and other illustrations
- Optional activities to review background information from web pages, PDF files and videos
- Screen captures illustrating S-100 concepts implemented in the CARIS S-57™ Composer desktop electronic chart production software, which supports creating, editing and exporting

## S-100 products

Participants can proceed through the training materials at their own pace on any computer with internet access. The workshop is freely available for CARIS users with an active Subscription, or for a USD300 fee per user for non-CARIS users or those without Subscription.

[Registration and further information](#) about the CARIS S-100 online workshop are available online.
