

Preparations for the Hydro International Business Guide 2018

The team at 'Hydro International' is currently preparing one of its most important issues of the year: the annual Business Guide. The 2018 edition of the Business Guide will provide valuable insights into the current state of the hydrographic market and associated industries.

A key article in the Business Guide 2018 is a report based on the findings from a [market survey](#), providing a unique perspective on the future direction of the hydrographic business. This comprehensive publication additionally includes in-depth articles, each exclusively written for Hydro International, zooming in on the very latest trends and developments in the application of hydrography, the business of hydrography and related aspects.

Hydrographic professionals traditionally keep the Hydro International Business Guide for future reference and regularly consult it throughout the year. If you would like to receive more information about how to be included, please contact key account manager Sybout Wijma: sybout.wijma@geomares.nl.
