

PRIMAR Launches ENC Update Tracker

The PRIMAR Update Tracker (PUT) is a web-based ENC update overview which enables users to view and track changes made since the last ENC update. PUT increases the user's ENC update familiarisation, allowing him to follow updates and changes in his active chart folio.

Such a visualisation of the ENC update will contribute to improve the user's situational awareness either for navigation or planning purposes. The user may also find it useful if he wishes to become more familiar with the waters he frequently operates in.

[Additional information on the PRIMAR Update Tracker](#) is available on the manufacturer's website.
