

Saab Seaeye Awarded ISO 9001:2008 Accreditation

Saab Seaeye has been awarded the ISO 9001:2008 accreditation from Det Norske Veritas (DNV). The enhanced DNV Risk Based Certification is awarded to only a select group of companies across the globe. It recognises that Saab Seaeye has verifiable, consistent and continually improving systems for management control, safety and quality.

To achieve certification, Det Norske Veritas make organisations undergoing a rigorous and comprehensive assessment to demonstrate that their processes and organisation meet defined standards of quality that instil trust and confidence in the company's customers and prospects.

For Saab Seaeye, DNV certification underpins their strategy for continued market growth and technological innovation across their range of ROVs. This range extends from compact and rapidly deployable systems, to powerful work-class vehicles. The ROVs are used across many market sectors including the oil and gas industry, defence, hydro and civil engineering, the emergency services, marine science and undersea tourism.
