

DESIGNED FOR A SEAMLESS WORKFLOW

SWiFT Deep CTD

The new SWiFT Deep CTD profiler provides survey-grade sensor technology coupled with the convenience of **Bluetooth®** wireless technology, a rechargeable battery and an integral GPS module to geo-locate each profile.

Ease of use is at the heart of the SWiFT range. The new SWiFT Deep CTD not only makes any problematic battery changes a thing of the past but delivers fully-automated data transfer with no user input required, it also features Valeport's signature SWiFT magnetic switch ring. The switching ring is easy to operate even with cold hands. It simply turns through 90 degrees and reassuringly clicks into position. The end cap features user-friendly LED indications for operational status, GNSS, battery and **Bluetooth®** wireless technology.
