

Through-hull Hoists at Oceanology International 2016

Ocean Marine Systems are set to debut their patented through-hull instrument hoists at Oceanology International on stand J550 in ExCel London from 15 to 17 March 2016. Suitable for the offshore oil and gas, security, survey, and search and rescue industries the instrument hoists are designed, engineered and manufactured to complement underwater instrumentation and integration companies.

On the stand, visitors will be able to see first-hand the unique features of the through-hull instrument deployment hoist and speak directly with the pioneers behind the innovation. The hoist, which will be operational during the show, can retract, so when not in use the vessel has no extra drag. It can rotate and tilt which means it gives the operator ultimate control as to where the instrument head points, providing 360 degrees of repeatable control and positioning.

All products are designed and manufactured in the UK before being shipped to customers around the world. Ocean Marine Systems look forward to welcoming interested professionals at stand J550. To arrange an appointment please [contact Lou Johnson](#).
