

# Vast Multi-client 3D Seismic Survey Programme Offshore of Mozambique

CGG has signed a multi-client data agreement with Mozambique's Instituto Nacional de Petroleo (INP) following a competitive tender process held by INP in 2016. As a result of this agreement, CGG will shortly commence acquisition of a new multi-client survey of up to 40,000km<sup>2</sup> of 3D data over the Beira High in the Zambezi Delta, covering blocks Z5-C and Z5-D and surrounding open acreage.

Deliverables will include fast-track PreSTM, Final PreSTM and PreSDM. The seismic data will be imaged with the latest 3D broadband deghosting and advanced demultiple, velocity modelling and imaging techniques, including Full-Waveform Inversion.

This survey will form part of a comprehensive, fully integrated JumpStart™ geoscience programme that will deliver a better overall understanding of the prospectivity of the region. Marine gravity and magnetic data will be acquired simultaneously with the seismic to accelerate regional interpretation.
