

200th Seaeye System for Vietnam

Seaeye Marine has delivered its 200th ROV system to PTSC in Vungtau, Vietnam. This Panther Plus system includes a TMS and a Seaeye Launch and Recovery System featuring an elevated 'A' frame pivot point allowing the deployed package to clear a two-metre ship's side or guard rail. Heavy-duty five and six function manipulators are included, together with a standard array of sensors and capacity for additional tooling.

Four PTSC pilot technicians undertook a 14-day factory training-course in the UK that included both operational and technical training on the system. Further training will be provided in Vietnam following commissioning of the system.

PTSC will provide drill support and survey services in the region with their Panther Plus, the eleventh of its type to be delivered by Seaeye.
