

AAE Sub-Bottom Profiling Equipment for Abu Dhabi

Seatronics prides itself on offering its many clients the latest technology. This strategy has seen them make a significant investment in further equipment from Applied Acoustic Engineering (AAE) to expand the sub-bottom profiling stock available from their Abu Dhabi operation.

The additional CSP1500 and AA300 boomer plate system has been immediately used on a pipeline route survey between Qatar and the UAE and is already earmarked for other engineering surveys offshore UAE and Oman.
