

AAE Transponder Sales 2003

Applied Acoustics have just delivered an order for seventy Mini and Midi Transponders to one Aberdeen-based client, in addition to a number of other high-volume positioning and release transponder orders from clients in both Northern Europe and North America. All orders also contained significant numbers of AAE PAM Tester/Chargers and Smart Chargers.

CEFAS, Global Marine System, Subsea7 and the AAE US Distributor Subsea Technologies Inc. are some of the organisations who have procured significant numbers of AAE 900 Series Transponders and Acoustic Releases during the first half of 2003.
