

AC-CESS AC-ROV Sale

Deep Development Corp (Canada & US) and KeySpan Energy (Canada & US) have agreed purchase of an AC-CESS AC-ROV micro-submersible, including two-function manipulator and rear-view camera options. Keyspan intends to use the Search Warrant ROV for the inspection of water-intake canals at its power plants, including pilings, dams, sheet piles, pumps and screen-wash racks. Inside the plants the company will use it to inspect piping systems that are always full of water. Using the grabber arm it will now be possible to retrieve foreign objects from these systems. If the need arises, the ROV can also be used to inspect underwater electricity cables and gas mains.
