

AC-ROV Options

AC-CESS has successfully launched a suite of new vehicle options. During Ocean Business 2009 (Southampton, UK) an USBL positioning and tracking system, thickness gauge and variable intensity laser scaling system was demonstrated.

Visitors were encouraged to fly the AC-ROV in the stand demonstration tank, while successful dockside demonstrations of the new AC-ROV High Performance Thruster (HPT) were carried out. The HPT offers greater vehicle speed, power and excursion capability without compromise of control or stability. The HPT will be fitted to all new build AC-ROVs as standard and is available as a straight change-out component to all existing users.
