

AC-ROV to Saudi Arabia

Saudi Arabian marine construction company Huta Marine Works has taken delivery of an AC-ROV Underwater Inspection System. The sale represents the first export into Saudi Arabia for AC-CESS. With over 2,500 employees, Huta Marine is a specialist marine equipment owner operator, supporting a broad range of construction activities in the Persian Gulf and surrounding Middle East region.

The AC-ROV has two specific inspection roles within the Huta organisation: Firstly, the unit is deployed in a health and safety capacity for dive site inspection of hazardous and confined environments, such as water intakes. The dive site is inspected and mapped prior to the dive team entering the water; with the AC-ROV monitoring the dive team when work is underway. Secondly, the vehicle enables site engineers and decision-makers to view submerged targets and work progress first hand, minimising disruption to the work site and ahead of mobilising the dive team.
