

ADCP Workshop

On 18th November 2004 Aquavision BV from Utrecht (The Netherlands), in co-operation with the department of Physical Geography, University of Utrecht, organised a one day workshop on various applications of Acoustic Doppler Current Meters (ADCPs). It was the seventh in an annual series. Under the Chairmanship of Prof. Dr. P.Hoekstra (Chairman department of Physical Geography, Utrecht University) representatives from Universities, Dutch and Belgian Government, a Rockdumping Company and a Survey Company presented their experiences with ADCPs and/or new applications. In between the lectures manufacturers were given the opportunity for a Product Presentation, in addition to showing their instruments in a couple of stands near the entrance of the lecture room. Some 75 attendants were registered. They must have been very happy with their decision to attend this well organised and very informative workshop.
