

ADCPs in Action Returns to San Diego

Teledyne RD Instruments (RDI) will host its next ADCPs in Action Users' Conference in San Diego (CA, USA) from 5 to 7 October 2009. This conference was designed to bring the oceanographic community together for a lively exchange of information between Acoustic Doppler Current Profiler (ADCP) and Doppler Velocity Log (DVL) users, industry experts, and third party manufacturers.

Teledyne RDI's 2009 event will once again be comprised of three simultaneous tracks including: water resources flow measurement applications; coastal/oceanographic current profiling/waves measurement applications; and precision navigation applications.

This year's event will include presentations provided by customers and industry experts, extensive product/software training, user forums, data analysis clinics, new product introductions, poster papers, and innovative third party solutions. This three-day conference also includes numerous social events designed to encourage networking and a free flowing exchange of ideas and information.

Teledyne RD Instruments is formally seeking ADCPs in Action 2009 speakers, co-sponsors, poster paper presenters, and attendees.
