

AML CTDs with UV•Xchange Chosen by Ocean Networks Canada

AML Oceanographic has been selected to supply CTDs for Ocean Networks Canada's™ Smart Oceans programme. AML Metrecâ€•X instruments will be deployed on cabled observatory platforms off Canadian coasts to provide data imperative to improving environmental monitoring and marine safety.

AML's award-winning UV•Xchange and Cabled UV will prevent biofouling of Xchange and other environmental sensors on each CTD, in addition to other critical surfaces of the platform. The prevention of fouling-induced drift will allow the sensors to provide accurate data for the duration of the in-situ deployments.
