

# AML Oceanographic Wins Innovative Excellence Award

AML was crowned the champion of Innovative Excellence at the VIATeC Technology Awards on 20 June 2014. The Innovative Excellence Award recognises a company that has designed and produced a revolutionary product. AML defeated its opponents with the development of the biofouling control product UV•Xchange.

UV•Xchange prevents fouling by bathing critical surfaces in ultraviolet light, keeping the desired area clean and sensor data accurate. Unlike other existing methods of biofouling control, UV•Xchange inhibits marine growth without any contact or chemical pollution, and is suitable for surfaces of complex geometry.

Now in its 13th year, the [VIATeC Technology Awards](#) hosted over 750 attendees from Victoria's expanding advanced technology sector and awarded 13 victors selected from over 100 nominees.
