

Applied Acousticsâ€™™ Nexus 2 USBL Available for Rent in USA

The Applied Acoustics Nexus 2 USBL positioning system is available for rent in USA via the company's American representatives Subsea Technologies Inc. based in Katy, Texas. Incorporating advanced bi-directional spread spectrum acoustic protocols, Nexus 2 achieves greater, more reliable accuracy over an extended operational range. Embedded as standard within each Nexus 2 system are a comprehensive range of additional software features and survey tools such as georeferenced graphical overlay function and EasyCal 2 calibration tool.

Nexus 2 is the latest system in the range of subsea USBL systems that are designed and manufactured by the company based in Great Yarmouth, UK.

As with all systems designed by Applied Acoustics, the positioning and tracking system is quick to deploy with easy set up procedures and can be used with a variety of Applied Acoustics' positioning beacons, legacy products and transponders from third party manufacturers.
