

At-Sea Underway CTD Demonstration

Oceanscience will conduct a hands-on demonstration of the revolutionary Underway CTD system on Monday 5 May 2008 in Oceanside. Dr. Jochen Klinke will lead the at-sea demonstration; it promises a full day of operation and handling plus an in-depth look at CTD from a moving vessel.

Topics will include underway profiling principles, probe interface and control, data products and accuracy, and comparison with towed instruments and expendables. This is a must-attend opportunity if you are interested in making high quality CTD measurements. Boat space is limited so please assure your seat with [Sandra Maring](#) at +1 7607542400 x 12.
