

ATLAS for Colombian Navy

ATLAS Hydrographic, in association with Ferrostaal de Colombia, has been contracted by the Colombian Navy's Hydrographic Service to supply ATLAS HYDROSWEET MD-2 30kHz 5000m and ATLAS FANSWEET20 200kHz shallow water multi-beam echosounder systems.

The systems will be commissioned and installed on two hydrographic survey vessels operating from Cartagena and used for national survey operations.

Each system is being supplied together with TSS motion sensor, Valeport sound velocity profiler and Trimble DGPS facilities. Support software comprises Coastal Oceanographics' HYPACK MAX and HYSWEET modules for acquisition and storage of all data, in addition to CARIS HIPS and SIPS for post-processing operations.
