

Broader Range

Teledyne RDI recently purchased the entire line of CTD products from Falmouth Scientific Incorporated (FSI), including the patented Non-eXternal Inductive Cell (NXIC) that has already acquired a solid reputation for robust operation in shallow, fouling environments.

This product line delivers exciting and proven technology complementary to Teledyne RDI's Acoustic Doppler Current Profiler (ADCP) products. The addition of the CTD product line represents a tremendous opportunity for us to quickly expand our product offerings and deliver turn-key solutions to our worldwide customer base.
