

Brone Survey Debuts at OI 2014

Brone Survey, a geophysical and geotechnical survey company primarily focused on the West African sub-region, has debuted at Oceanology International 2014. Showcasing three dedicated survey vessels permanently stationed in West Africa, Brone is exhibiting geophysical and geotechnical survey capabilities available in the sub-region.

Group managing director/CEO Mr Bunmi Akomolede said that Brone Survey is strategically positioned to provide cost-effective survey services to oil & gas, construction, cable and telecommunications industries within Africa. With deliberate alliances forged with multinational companies, several combined decades of experience are brought into play alongside extensive knowledge of the West African terrain and peculiarities, he continued.

Brone Survey intends to expand its reach, providing world-class resources to a wider range of clientele with interests in West Africa, South Africa and East Africa. Brone Survey has been operating in Nigeria, West Africa, for 14 years and has built up an impressive track record working for multinational IOCs in West Africa, with its activities ranging from deepwater surveys to offshore and inshore surveys.
