

Bustling Oceanology International 2014 for OSIL

OSIL is looking back to a successful Oceanology International show. This year saw a change of stands for the UK-based company, which was very well received by attendees to the trade show, and great interest in the two main products featured on the stand: the Multiple Corer, and the Tern Buoy, which generated a surprising number of photo opportunities, according to OSIL.

The predominant focus of delegate's interest was the large range of sediment corers and data buoys available from OSIL, with separate slideshow displays of various systems in the field, such as the Giant Piston Corer, attracting additional attention.

Dr Richard Williams, Managing Director of OSIL, commented that the response they have had has been superb – the staff seem to have spent three days talking non-stop to potential new clients and existing customers, who are very pleased with the work OSIL do for them.

OSIL are now looking forward to attending the next OI China exhibition, which takes place at Intex Exhibition Centre, Shanghai from 3 to 5 September 2014.
