

# C-Nav 3050 GNSS Receiver Improvements

C-Nav has announced the latest advances to its C-Nav3050 GNSS receiver. The C-Nav3050's latest range of advances include the addition of dynamic RTCM outputs and choice of either NTRIP client or server mode operability.

The latest enhancements also include extended Bluetooth facilities and Ethernet virtual comports, additional Moving Base RTCM Code, Moving Base RTK capability and RTK heading applications; additional internal data logging capacity; improved L1/G1/L-Band modes and autoselect for maximum Net-1/Net-2 C-Nav coverage.
