

Canyon Offshore ROV Contract

Perry Slingsby Systems (PSS) has secured a contract to supply two new generation Triton XLX ROV systems and one Triton XLS ROV system to Canyon Offshore. The agreement will see PSS deliver two of the 3,000m systems this summer with the final system delivered before the end of the year.

Each TXLX system features the ICE control system (Integrated Controls Engine) and a standard suite of survey and advanced tooling interfaces. ICE is the latest generation of subsea control system that provides an intuitive front end user interface with unparalleled system level diagnostics.
