

CEDA Dredging Days 2011

Dredging is no longer a stand-alone exercise, but is rather becoming part of a broader, more integrated project realisation process. We are no longer in the era of "Dredging and nothing but dredging", we are in the century of "Dredging and beyond". The CEDA Dredging Days 2011, to be held on 10th and 11th November 2011 in Rotterdam, The Netherlands, will focus on two main areas where this integrated dredging approach is emerging.

Subjects are Dredging and rock dumping for the offshore oil and gas industry and deep-sea mining; and Building with nature for soft and hard dredging solutions (coastal and inland). Combining the strengths and knowledge within the dredging profession with that within the partnering fields in the above areas presents an enormous innovative potential.

CEDA Dredging Days 2011 will bring together a multidisciplinary group of experts to present the newest results of their cooperation and to discuss new requirements and opportunities for improvement.
