Coastal Survey Software

CARIS has released HIPS Version 6.0 off-the-shelf bathymetric data cleaning and validation software integrated with powerful vector product creation. Highlights of this release include new CUBE (Combined Uncertainty and Bathymetry Estimator) processing, new multi-resolution BASE Surface technology for creating surfaces of varying resolution, new support for on the fly-scale bars and raster legends and new raster data and BASE surface display capabilities. HIPS can take raw sounding data from ship to chart. Supporting over forty industry-standard data formats, HIPS and SIPS can be integrated into any workflow. It is used by more than two hundred organisations in more than fifty countries.
