

# Compact Side-scan Sonar

Tritech has launched the StarFish 450H, a hull-mounted side scan sonar which produces spectacular images of the seabed. The compact, slim-line sonar design combined with flexible mounting bracket can be fixed on to any vessel and allows you to monitor the seabed for interesting targets during every journey.

With hull-mounted systems there's no need to worry about snagging a towing cable when surveying in shallow or high traffic waters, making it very simple to operate. Its ease of use makes it an ideal system for anyone needing to capture digital images of the seabed on their own.

Utilising advanced digital CHIRP acoustic technology, developed from the professional underwater survey industry, StarFish 450H can view targets at longer ranges without any loss in image quality. It outperforms many larger, commercial systems in shallow water and at a fraction of the cost.

The StarFish 450 Series is designed to be 'Plug and Play', connecting to your Windows PC or laptop via a USB connection. Simple, one-time installation to your boat means you now have the ability to capture real-time, digital images of the seabed during every journey you make. The 450H is straightforward to operate and user-friendly software makes seabed imaging easy for everyone.
