

CUBE-Technology Implemented in Multibeam Editor

Hypack has entered into an agreement to become a commercial partner with the University of New Hampshire's Center for Coastal and Ocean Mapping (UNH-CCOM). The agreement will accelerate the transfer of technology developed by UNH-CCOM to over 3,000 Hypack and Hysweep users. The first application for users will be the integration of UNH-CCOM's CUBE algorithm into Hysweep's multibeam editor during the summer of 2006.
