# Digital Video Visualisation Contract for Wish Software

UK-based Wish Software has been awarded a digital video visualisation contract by Statoil. This project will implement Wish Software's ground-breaking new VisualGIS Server software, thus making digital video and accompanying survey data available across the enterprise and the web.

Users will be able to access their data on zero-client (no install) HTML5-compatible browser-based viewers on devices such as desktops, tablets and iPads. Digital video data is synchronised geographically with web maps provided by ArcGIS Server. Multiple surveys can be displayed simultaneously to provide year-on-year comparisons.

For further information on VisualGIS server, please visit http://www.wishsoftware.com
