

Dockside Demonstrations at Oceanology International 2020

At the dockside of Oceanology International, 2020 visitors are offered daily demonstrations of the newest and innovative floating technologies. This live experience will allow them to immerse in the real benefits of the technologies brought to Oi 2020, including the latest in ASV, ROV, Sensor and Imaging technologies, as well as multiple survey and working vessels.

Visitors can watch live coverage of equipment at work via the popular elevated viewing cabins alongside the Royal Victoria Dock, private meeting areas and onboard working vessels. All this free of charge.

Oceanology International has doubled the number of companies demonstrating the technology in 2020, so don't miss the chance to explore the possibilities beyond the exhibition. Create an agenda with the timetable below and [register](#) now to guarantee your place.

Daily Time Slots

Dockside Cabin 1 - Daily demonstrations

	Dockside 1	Stand number
