

Doppler Velocity Log Training

Teledyne RD Instruments (TRDI, USA) will host a 2-day training seminar focused on their Doppler Velocity Log (DVL) technology. DVLs are used extensively onboard underwater platforms and surface vessels to provide precision navigation capability. This training will be hosted in Houston, TX, USA on 18 and 19 April 2013. Attendees can sign up to attend one or both days of training.

The first day is dedicated to basic DVL principals; 19 April is an advanced theory and application course. See the [full details and online registration](#).

All current and potential DVL users are encouraged to attend this event to quickly expand their working knowledge of the principals behind their DVL,

and its application to their underwater platform.

For further information, please contact Gail Lamangan at Gail.Lamangan@teledyne.com.
